PRODUCT DOCUMENTATION

CHESTPRESS DELTA

LINEAR ROW

LINEAR SHOULDER

LEVERAGE SQUAT

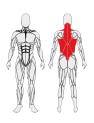

PENDULUM SQUAT

SEATEDROW DELTA

It is designed with a trajectory that falls diagonally.
It provides a strong sense of contraction at maximum contraction. It can be driven on one side, and you can feel an excellent sense of movement even in a one-arm row.

Product Name	SEATED ROW DELTA	Color	$\circ \bullet \bullet$
Dimensions	W 1250mm x L 1100mm x H 1800mm	Manufacturing Country	KOREA
Manyfacturing	REPCONCOMPANY		

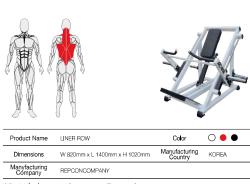

% For details, please contact "repconcompany@naver.com"

LINEAR ROW

This machine allows even beginners to easily demonstrate the bent over row movement. The difference between the saddle angle and the slide angle creates a movement trajectory that naturally moves toward the pelvis.

Depending on the grip position, targeting exercises for the upper and lower back are possible.

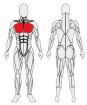

CHESTPRESS DELTA

It moves in a straight line, creating a more stable press movement with consistent elbow and shoulder positions, and provides excellent eccentric Provides excellent contraction sensation during peak contraction

LEVERAGE SQUAT

With an exercise trajectory opposite to that of the V-squat, General back squat movements can be performed more stably.

PENDULUM SQUAT

It reduces the strain on your back and lumbar spine, giving you more movement that you may otherwise miss during squat exercises.

This can give greater focus to the thighs and gluteus maximus.
